The GRC platform built to help construction and housing teams deliver more with less risk

Construction and housing teams are under pressure from every angle

On-site, you are juggling safety, quality, cost, schedule, subcontractors, and constant change. Decisions get questioned months later. Evidence gets requested long after the moment has passed. **And when something goes wrong, "we did our best" does not hold up. What matters is what you can prove.**

That's why **construction and housing teams need GRC that runs alongside live delivery**, not a once-a-quarter reporting exercise.

Trusted by companies around the world

Why construction and housing organizations choose CoreStream GRC

Because it reflects how work actually happens in their environment:

- **Built for high-scrutiny delivery**, where decisions are revisited and evidence matters
- **Flexible, no-code configuration**, so you can match your operating model instead of forcing change for the software
- **Intuitive user experience**, including for non-specialists who do not live in GRC tools all day
- **A single source of truth**, so reporting is faster and accountability is clearer
- **Responsive partnership**, with clients repeatedly calling out service quality and implementation support

Book a construction-focused GRC workshop

Pressure-test your current approach with experts who have worked with Morgan Sindall, Horton Housing and many more.

Identify where governance fails, what evidence is needed, and practical ways to reduce reporting and close gaps.

> "There are plenty of expensive and complex risk software offerings out there, but we wanted a product that was **simple to use and intuitive.** We quickly appreciated that the CoreStream GRC product was for us and, importantly, one with the potential and **flexibility for our users to grow with**"

CoreStream GRC for construction and housing

CoreStream GRC is a **flexible, no-code platform** that you shape to fit how your teams actually work.

What you can run in one connected system:

- **Project and enterprise risk in parallel** - Run two distinct but connected processes side-by-side, so project delivery risk does not get lost in the enterprise view.

- **Risk registers that stay live** - Move away from once-a-year risk updates and treat risk as a living discipline that is used daily, with real engagement from leadership.

- **Actions and controls that actually stick** - Link risks to controls and mitigation actions, so ownership is real and follow-through is visible, not buried in email threads

- **Audit trails you can defend** - Capture decisions, evidence, and changes so you can answer hard questions later without a scramble including conflicts of interest and gifts & hospitality.

- **Real-time reporting that replaces manual committee packs** - Stop losing days to report prep. Dashboards and packs can be generated quickly, with drill-down when leadership asks "why."

- **Configurable workflows, without heavy IT projects** - CoreStream GRC is practitioner-led by design, and repeatedly described as configurable like "Lego bricks" so you can align the system to your framework instead of bending your framework around the tool.

- **Health and safety dedicated solution** - 360° visibility into safety risks, harness powerful insights to spot trends, take swift corrective action, and implement proactive measures before risks escalate.

"**If we can do it all in one place** - here is our gifts and hospitality register, here is our staff qualifications register - that is what we are looking for.

Build it once and use it across the organization. Colleagues know for incidents, processes, and more, the place I need to go to is CoreStream GRC."
