

The flexible, intuitive platform for you to complete your GRC journey.

Rail and transportation operations need to be seamless. Your GRC technology should match.

Rail and transport organizations operate under constant scrutiny. Safety obligations are **non-negotiable**. Regulatory oversight is continuous. Decisions are documented, reviewed, and revisited long after they are made.

Yet many rail and transportation teams are still relying on **spreadsheets, email chains, and disconnected tools** to manage safety, compliance, and regulatory commitments. That approach **can't scale**, and it does not hold up in **safety-critical infrastructure**.

SOLUTION

GRC built for Rail and Transportation organizations

CoreStream GRC embeds governance into the way rail and transportation organizations actually operate. Instead of managing compliance after the fact, CoreStream GRC enables rail teams to:

- Manage franchise and regulatory obligations in **one operational system**
- **Separate legacy** commitments from **live** service requirements
- **Track** actions, incidents, deadlines and evidence without manual chasing
- Maintain **clear, defensible audit trails** for inspections and reviews
- Give leadership **real visibility** without overloading teams

The platform is **flexible and no-code**, configured around your franchise structure, terminology, and operating model. **Governance runs alongside the railway**, not on top of it.

If your GRC relies on spreadsheets, it's already a risk.

"Delivering on some of the most complex third party risk, internal control, and risk management projects for major corporations.

CoreStream GRC's platform is a powerhouse: agile, highly configurable, and capable of being tailored to an organization's specific needs with minimal effort."

Michael Rasmussen GRC Analyst & Pundit
at GRC 20/20 Research

Why rail and transportation organizations choose CoreStream GRC

- **Purpose-built GRC for safety-critical transportation environments:** Designed for live services, franchise obligations, safety management systems, and continuous regulatory oversight, with rapid implementation timelines that do not disrupt operations.
- **Expert-led, community-driven GRC team with real rail experience:** Our platform is shaped by practitioners who understand transport regulation, franchise compliance, and regulator engagement, informed by proven configurations across rail environments.
- **Flexible, no-code configuration without operational lock-in:** Governance adapts to your workflows, escalation routes, and terminology without rigid modules or custom development that becomes hard to maintain.
- **Intuitive GRC software for operational teams, not just specialists:** Compliance, assurance, and operational teams can use it from day one, without heavy training or workarounds.
- **Proven under real regulatory pressure:** Trusted by rail organizations operating in highly visible, safety-critical environments where failure carries financial, regulatory, and reputational consequences.

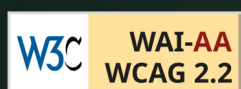

"The CoreStream system provides us with an amazing single source of truth — not just for what needs to be done, but also for what's been completed. If in doubt, get it into CoreStream. You can never have too much information."
