SCF

SANNOS.

GRC leaders tell us the same thing: every new framework lands as another project, another spreadsheet, another round of evidence requests to the same control owners. SANNOS, delivered through CoreStream GRC and powered by the Secure Controls Framework (SCF), replaces that fragmented model with a **single solution**. Identify the **controls** relevant to your business based on your security **objectives and jurisdictions**, map them across NIST, ISO 27001, DORA, NIS2, PCI and beyond, and assess compliance with AI assistance – **one assessment, multiple frameworks, continuously current**.

Build security and resilience on a single unified controls catalogue

The SCF is created and maintained by **volunteer GRC professionals including CISOs, architects, auditors, and privacy experts**. It is **updated** quarterly as a Living Control Set (LCS), ensuring compliance programs stay current.

With the CoreStream GRC platform, you can now tap into this **collective wisdom** and build your own controls framework holistically to reflect the nature of your business and your security ambitions.

Assess once, comply with many

A single SANNOS-powered assessment within CoreStream GRC's flexible, intuitive platform provides you with a **view across multiple frameworks simultaneously – within hours, not days or months**.

By eliminating duplicated and costly manual testing, your team can **focus on validating the results** and implementing the recommended remediation to enhance your compliance posture.

Transforming compliance with measurable results

laws, regulations and
frameworks mapped
with SCF

*“Our solution enables you to **control once and satisfy many**. It provides **full visibility** into where controls operate across your organization, whether at an entity level or within / around specific systems.*

*Evidence can be collected directly from control owners or automatically, and then intelligently assessed through SANNOS' intelligence layer. This gives you a **clear, real-time view of compliance and gaps across your entire estate**, spanning all selected frameworks, through a single, unified set of controls.”*

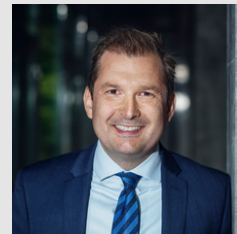

Paul Cadwallader
GRC Strategy Director

= corestream grc

“Compliance shouldn’t be rebuilt for every framework. SANNOS AI with CoreStream GRC and SCF, **changes the model**, assess once, scale across NIST, ISO 27001, CMMC, DORA, NIS2, and beyond, with up to **80% time and cost savings**. Trusted and built by Big 4 firms.”

Anders Søborg, CEO

SANNOS.

Feel assured by best-in-class compliance solutions

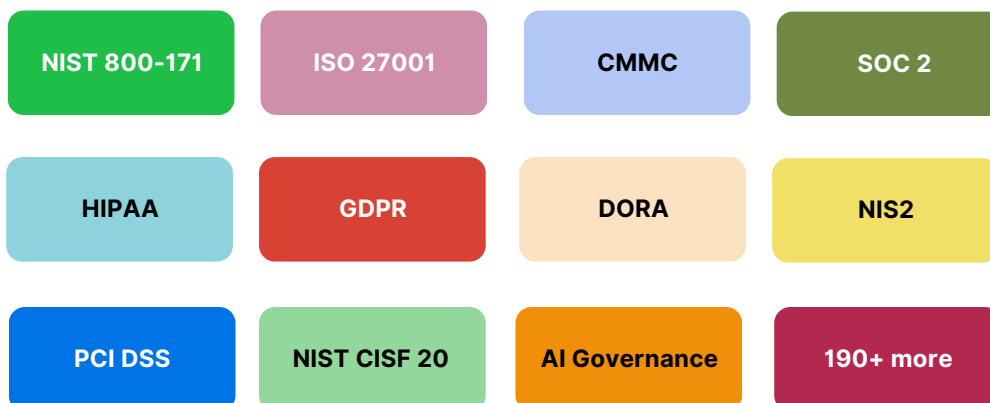

Tested against 3,000+ pages of SCF compliance documentation with 0 false positives. SANNOS and CoreStream GRC delivers structured, traceable, audit-ready outputs, not just AI-assisted suggestions.

The SCF is the only major metaframework using **NIST IR 8477 Set Theory Relationship Mapping (STRM), the US Government’s gold standard for crosswalk mapping**. Every mapping documents a precise relationship type and numeric strength score, making coverage transparent, auditable, and defensible to regulators and auditors. The SCF also participates in the NIST OLIR Program with government-recognized validation of mapping quality.

Our capability can be used for your own **internal control environment**, against multiple frameworks. You can also use it as part of your **extended enterprise assessment**. Obtaining evidence from your third parties to check their conformance against the required frameworks where they are an extension of your organization.

This solution empowers GRC teams to **move from point-in-time snapshots to a live compliance posture with structured evidence traceability and audit-ready outputs**, always ready for regulators, auditors, boards, and employees to login to the CoreStream GRC platform and see.

Your frameworks mapped efficiently and effectively, including:

Before 🙄

- **Slow:** Each framework requires a separate project - months of repeated work
- **Expensive:** Duplicate consultant and team effort per regulation
- **Unreliable:** Manual mapping leads to gaps and inconsistencies
- **Weak:** Point-in-time snapshots, not continuous assurance

After 😊

- **Fast:** Assess once - knowledge maps across all frameworks instantly
- **Efficient:** 80% cost and time reduction vs. traditional multi-framework programs
- **Reliable:** AI-driven cross-framework mapping with no manual duplication
- **Trusted:** Used by Big 4. Only SCF-certified AI in the US by Cyber AB globally.
